## Wahoo Docks

Your Aluminum Dock Experts

Commercial Edition

## Marinas

Thank you for considering a Wahoo dock. You will find that our docks are state-of-the-art and that our engineers and support staff are knowledgeable and user-friendly. We have been building docks for over twenty years and pioneered the heavy-framed aluminum dock over a decade ago. The feature benefits of aluminum were obvious and significant, and so we repositioned the company to manufacture our present dock system built entirely with proprietary aluminum structural components. These components, combined with the use of stainless steel fasteners, generous bracing reinforcements in heavy stress locations, highly durable hardware and accessories and our time-tested designs, create a dock with unparalleled advantages...

**Highly Durable**  
**Aesthetically Appealing**  
**Maintenance Free**

Close inspection of our docks illustrates what sets Wahoo apart from our competitors. All welding is done with the continuous wire feed (MIG) welding process, using the finest quality wire and gases and is performed by skilled welders. The aluminum we use comes direct from the mill where virgin aluminum is extruded to our demanding standards. Our docks are straighter, stronger and more precise than our peers because our cuts are exact and our tolerances small. In short, a Wahoo dock doesn't have the occasional failure, or intermittent rust, or loose fitting, or broken anchor system, etc. Our dock system was designed from the outset to maintain its structural integrity and appearance for many years without continual upkeep, and time after time, storm after storm, it will stand up to this high standard.

We build our docks as inexpensively as possible by working in a modern factory with a manageable staff of highly skilled individuals, which allows us to closely control quality and production. We are demanding of our vendors and purchase component parts at bulk prices because of our high volume. These factors result in us being able to offer our docks at prices similar to those of docks made from much lower quality components, such as galvanized steel.

## Community Docks

Today, Wahoo has literally hundreds of installations across the United States but each dock is manufactured and pre-assembled in our 36,000 ft<sup>2</sup> plant to ensure a perfect fit with each installation. Our designs are flexible as well as durable and can incorporate a wide variety of features including upper decks and varying slip sizes, dock shapes, freeboard heights, anchoring systems and buoyancies.

Finally, the support we offer is unmatched. We can provide engineering and design recommendations, pricing consultation, engineer stamped drawings, regulatory approval support, as well as load and other necessary technical specifications. In most cases, we will provide 3-D representations of your dock before it is ever built to ensure that the design achieves exactly what you envision.

### Community Docks

A Wahoo dock is the ideal structure for community use. Our docks are incredibly durable, have unparalleled beauty and longevity, and require virtually no maintenance. What this means is that your dock will add significant value to the community and satisfaction to the residents. We are experienced in working with engineers, developers, architects and community associations during each step of the process to provide guidance and offer alternatives to ensure the best solution for your dock budget is achieved.

### Gangways

- 10' - 60' Standard Lengths
- Up to 100' Lengths Available
- 4' - 8' Standard Widths
- Custom Widths Available
- Full Piano Hinge Attachment
- Options: Transition Plates, Rollers, Wheels, ADA Handrails

## Public Access Docks

### Public Access Docks

Wahoo Docks has been working with public organizations for over a decade to build safe, long-lasting, attractive structures for use by the general public. We can assist with the development of the project specifications and are well versed in the safety and practical matters as they relate to public use facilities. Special features can be added to accommodate the handicapped and our rugged aluminum framing can withstand continuous wear.

### Discover the Wahoo Difference...

Wahoo docks are well built. Their structural channel is hefty and their aluminum decking is the best I've ever seen. The fit and finish of their docks show an attention to detail. We will use Wahoo for any docks we build in the future. - *Jim Keelin - Architect*

The dock is superb and there is nothing better. We are so pleased with it that we will use it for every waterfront development we have going forward.

- *Jouko Rissanen - Developer*

### Wahoo Products

- Floating Docks
- Gas Docks
- Floating Restaurants
- Fixed Pier Docks
- Breakwaters
